Summary

Senior Game Programmer with **6 years** of experience developing and shipping PC and cross-platform titles. Focused on gameplay systems, clean architecture, and performance optimization in C#. Takes ownership of features from concept through polish, works closely with design, and contributes to technical direction while building systems that remain stable and scalable as the project evolves.

Featured Titles

- **Enci's Solution**: Dark Emerald Gaming Studio
  - **Summary**: 3D platformer developed for PC and Xbox. A playable demo was previously available on Steam. Selected as a global finalist for Best Studio Game at GDWC 2024 Winter Season and showcased at Tokyo Game Show 2024.
  - **Steam Page**: https://store.steampowered.com/app/2602500/Encis_Solution/

Skills

- **Programming languages & Game Engines**: Unity, Cocos2x, C#, ReactJS, Javascript, Typescript
- **Graphics**: URP, Shaders Graphs, Procedural Animation
- **Game Development**: Gameplay systems, performance optimization, editor tooling, build pipelines, WebGL, Unity UI
- **Tools**: Git, Perforce, Jira, Figma
- **Soft skills**: Leadership, Project Management, Mentoring

Work Experience

- **Xflame Tech Design** — Dubai, UAE
  Senior Software Engineer — *Feb 2025 - present*
  - Stepped into multiple teams as needed, offering direction, clarity, and technical support while maintaining consistent delivery in a fast-paced environment.
  - Demonstrated strong adaptability by moving from Unity/C# to Cocos Creator/TypeScript within days, ensuring continuous delivery across diverse engine pipelines.
  - Developed a hybrid AOT/JIT Unity Hot-Update prototype that loads hotfix assemblies at runtime, removing the need for full rebuilds.
  - Developed a reusable chat system that can be plugged into different games with minimal effort, reducing implementation time across projects.
  - Maintained a high bug-fix approval rate, consistently closing issues quickly while proposing reusable, permanent solutions instead of temporary patches
  - Resolved blocking technical issues in the development pipeline and smoothened the development speed of the team.

- **Dark Emerald Gaming Studio** — Dubai, UAE
  Game Programmer — *Jul 2023 - Feb 2025*
  - **Major Contributions**:
    * Served as one of the core programmers, responsible for gameplay systems, technical architecture, optimization, and development tooling.
    * Designed and implemented the architecture for streaming multiple additive scenes to optimize resource usage **saving a fps drop of 30** during scene transition.
    * Designed UI system for in-game tools, including the main menu and pause menu, improving the player experience and accessibility by offering intuitive control and options during gameplay.

- Developed custom editor tools to streamline workflows and improve productivity, including an FPS counter tool, mesh correction tool, room selection tool, and checkpoint teleport tool, File search tool, script & prefab usage checker tool. These tools **boosted team productivity by 50%.**
- Created and implemented the procedural animation for the player character's scarf using Verlet Integration, improving the character's movement and realism.
- Developed a new volume component for post-processing called Iris Blur, adding a unique blur effect that simulates a focus transition, enhancing depth of field and visual immersion in the game. Later made a volume tween system for animating all post process components
- Architected and implemented a complete save system, enabling players to save and load progress seamlessly across various gameplay states, enhancing the overall user experience.
- Documented the system designs and created a comprehensive programmer's guide for future developers, ensuring smooth onboarding and facilitating understanding of complex systems and workflows.
- Tested and ensured the quality of implemented features by conducting thorough testing, identifying bugs, and performing optimizations to ensure stable gameplay and smooth user experience.
- Used Unity's Profiler to find and fix performance issues, applying techniques like time-slicing, dynamic batching, and occlusion culling. This **increased frame rates from an average of 40 FPS to a steady 60 FPS**
- Designed and implemented a custom build pipeline with custom options for automation and flexibility in builds, significantly reducing build preparation time by 60%. Responsible for creating final builds for high-profile events, including **Middle East Comicon** and **Tokyo Game Show**, ensuring they met strict deadlines and high-quality standards.

- **InApp** Thiruvananthapuram, India
  Senior Software Engineer, Team Lead *Nov 2020 - Jun 2023*
  - **Product**: Home Visualizer Tool
    - **Summary**: Home exterior landscaping visualization tool developed in unity for webGL platform. The Tool enabled to arrange 3d landscape objects on top of 2d picture of the home provided by user. User was able to draw custom shapes in the tool.
  - **Major Contributions**:
    - Completed the project from scratch to finish in 2 years meeting the deadline with excellent feedback from client.
    - Integrated splines to model realistic landscaping features like walls and pavers.
    - Streamlined Unity-Web interaction, handling API calls and JSON parsing for seamless integration.
    - Developed custom shaders for enhanced visual effects using Shader Graph.
    - Focused on user-centric design to ensure the tool was intuitive, responsive, and easy to use for users with varying technical expertise.
    - Implemented best practices in performance optimization, reducing load times and ensuring smooth interactions for users with different hardware configurations.
    - Ensured that the tool functioned seamlessly across different web browsers and devices, optimizing performance for mobile and desktop platforms.
    - Received 'Best Employee of the Quarter' award for the first quarter of 2022 during the time in Inapp
  - **Leadership**:
    - Led the development team, delivering the project on time and exceeding client expectations.
    - Conducted internal sessions on Unity features to foster team growth.
    - Acted as the primary point of contact between the development team and the client, providing regular project updates, gathering feedback, and ensuring that the client's needs were met throughout the development process.

Education

- **College Of Engineering Trivandrum** Thiruvananthapuram,India
  Bachelor of Technology in Computer Science and Engineering *Aug 2016 - Jul 2020*
